EDUCATION

Kristu Jayanti (Deemed to be) University

Master of Computer Applications — CGPA: 8.5

Bengaluru, India

Aug. 2024 – Present

Fr. Agnel College of Arts & Commerce

Bachelors of Computer Applications — CGPA: 9.9

Goa, India

June 2021 – May 2024

EXPERIENCE

Full Stack Intern

Feb. 2026 – Present

Jeff's Group of Companies

Bengaluru, India

- Developing a sports management ERP platform from scratch as a Full-Stack Intern in a startup environment, developing core frontend and backend modules to support sports operations.
- Designed and implemented end-to-end application features, contributing across the stack to establish scalable architecture and foundational system components.

PROJECTS

DatabaseDump | *React, TailwindCSS, TypeScript, Node.js, Express.js, PostgreSQL, AWS S3, AWS ECS* [link](#)

- Designed and built a multi-tenant SaaS platform for automated database backup and recovery, supporting MySQL, PostgreSQL, and MongoDB across multiple client environments.
- Implemented scheduled backups and configurable retention policies, reliably managing hundreds of backup jobs per day.
- Integrated with client-managed AWS S3 buckets for secure, tenant-isolated backup storage, enabling on-demand restore and downloads and improving disaster recovery workflows.
- Deployed Dockerized backend on AWS ECS with load balancing, health checks, and automated deployments, and hosted the React frontend on AWS S3, enabling scalable, fault-tolerant, and highly available cloud-native infrastructure.

CodeKeeper | *Angular, TailwindCSS, TypeScript, Node.js, Express.js, MongoDB, WebSockets, AWS S3* [link](#)

- Designed, built, and deployed a real-time collaborative code editor, actively supporting real-time multi-user editing in production.
- Developed the backend using Node.js and Yjs CRDT, enabling conflict-free document synchronization with under low latency.
- Integrated CodeMirror 6 with Angular to implement live cursor tracking and text selection highlights in a responsive UI, improving multi-user collaboration responsiveness across devices.
- Built a RESTful API backend with Node.js and Express.js, implementing JWT-based authentication, RBAC, and MongoDB, and integrated AWS S3 for document storage and fast retrieval.

LiveScribe | *Electron, React, Flask, Express.js, MongoDB, Python, Transformers* [link](#)

- Built a cross-platform desktop application using Electron and React to display real-time transcription overlays on any active application.
- Implemented low-latency speech-to-text using Python realtimeSTT with Whisper tiny.en and large-v2 models.
- Integrated a Long-T5 Transformer model in a Flask backend to auto-generate summaries, reducing manual note-taking time by 80%.
- Developed a Node.js and Express.js REST API backend with MongoDB integration to store transcripts and summaries with fast search and retrieval capabilities.

CERTIFICATIONS

AWS Academy Cloud Developing —AWS

2025

Azure Fundamentals (AZ-900) —Microsoft

2025

OCI 2025 Certified AI Foundations Associate —Oracle

2025

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, TypeScript, SQL, HTML, CSS

Frontend: React, Tailwind CSS

Backend: Node.js, Express.js, FastAPI, REST APIs, WebSockets

Databases & Storage: MongoDB, PostgreSQL, AWS S3, Supabase, Firebase

DevOps & Tools: Git, GitHub, GitHub Actions, Docker, Vercel, Render

Other: JWT Auth, Real-time Systems
